Lots of people have been talking about the Coronavirus. The Coronavirus or COVID-19 is a new virus that is making people sick.

The Coronavirus gives some people a cough, fever and sore throat. Some people only get a little sick and other people get very sick.
Because some people get very sick, everyone is trying very hard to keep Coronavirus from spreading to new people.

Businesses and people in the government are helping by canceling events where there are big groups of people.

Schools also close to help prevent the spread of germs.
There are things I can do to keep myself and my family safe too!

The best way to stay safe is to wash my hands often. I will wash with soap and warm water for at least 20 seconds. That is how long it takes to sing Happy Birthday two times.
If I am not by a sink, I can also use hand sanitizer.

I will also be careful not to touch my face, especially my mouth and eyes.
If I need to cough or sneeze I will use a tissue to catch the cough or sneeze. If I don’t have a tissue I will use my elbow.

This keeps any germs I might have from spreading to other people.

Cleaning can help keep germs away which may help keep people healthy.
I will do my part to help keep the Coronavirus and other germs from spreading!

Great Job!
