One of the best things I can do to stay healthy is to wash my hands often.

Flickr.com

Germs can get on my hands when I touch things, other people, or myself. Washing my hands gets rid of the germs so I don't get sick or pass them to other people!

The best way to wash my hands is to start with warm water and soap.

Wikimedia Commons

I can use bar soap or liquid soap. Both will get rid of the germs!

March Air Reserve Base

I will wet my hands and then take enough soap to cover the front and back of both of my hands.

Flickr.com

Then I will rub my hands together. I will remember to wash the backs of my hands and in between my fingers too.

PixaBay.com

To make sure I get all the germs off, I will rub my hands together with soap for at least 20 seconds.

Boardmaker

20 seconds is the same as the time it takes to sing Happy Birthday two times.

Boardmaker

Happy Birthday to you, Happy Birthday to you,
Happy Birthday Happy Birthday
Happy Birthday to you!

After 20 seconds I can rinse off the soap under the water.

Pexels.com

Then I take a clean towel or paper towel and dry off all the water.

Flickr.com

I did it!

Wikimedia Commons

Now I have clean healthy hands! I will wash them again soon!
